

CONTENTS

Special Talk: Yasushi ISHIKAWA (Ehime University) [dedicated to the memory of late professor H. Kunita.]	1
Stochastic analysis on the Wiener-Poisson space and its application to the nerve cell model	
Toru Sera (Kyoto University)	22
A conditional limit theorem for intermittent dynamical systems	
Kunio Nishioka (Chuo University)	25
On upper and lower bounds to ruin probabilities	
Tatsuhiko Saigo (University of Yamanashi)	45
Selfsimilarity related to EVT	
Kei Noba (Osaka University), José -Luis Pérez (CIMAT) and Xiang Yu(PolyU)	51
On the bail-out dividend problem for spectrally negative Markov additive models	
Shunsuke Kaji (Meijo University)	55
First passage times over increasing boundaries for Lévy processes with positive means	
Atsushi Takeuchi (Tokyo Woman's Christian University)	60
Gradient formula for jump processes on Riemannian manifolds	
Masaaki Tsuchiya (Kanazawa University)	67
Martingale problem for the generalized Lévy generator determined by a bundle of generating triplets of natural additive processes	
David Berger (Ulm University)	82
On quasi-infinitely divisible distributions	
Ken-iti Sato (Nagoya)	87
Reminiscences	

Kosuke Yamato (Kyoto University)	102
Fluctuation scaling limit for jumping-in diffusions with large jumps	
Yuki Ueda (Hokkaido University)	119
Freely selfdecomposability for the Fuss-Catalan distributions	
Muneya Matsui (Nanzan University)	129
Asymptotics of maximum likelihood estimation for stable law with continuous parameterization
